图解Text—CNN

Preprocess, Embedding, Conv-maxpool, Output

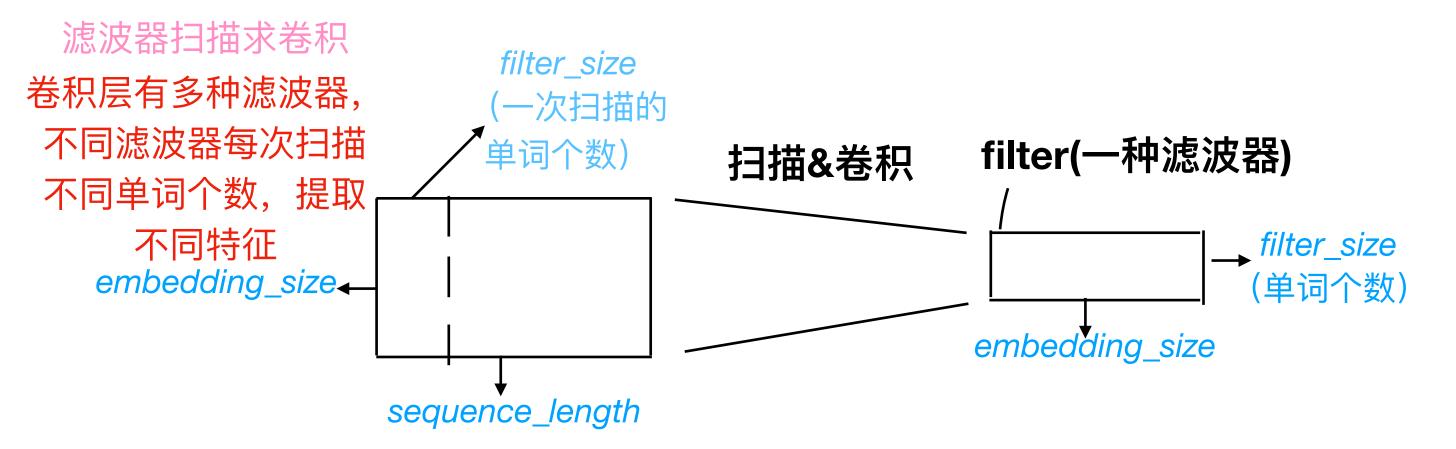

Preprocess+Embedding

Convolution+Maxpool

以一个句子为例

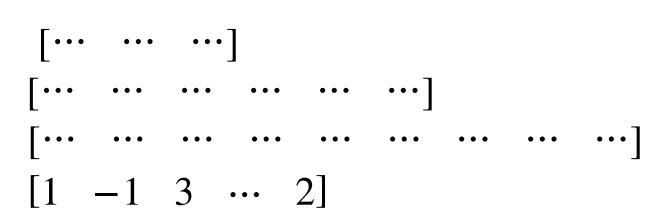

(数字瞎写的)

 $\begin{bmatrix} 1 & 2 & 5 & \cdots & 4 \end{bmatrix}$

多个句子时得到多行长度不一的矩阵

句子长度不一,所以 矩阵长度不一

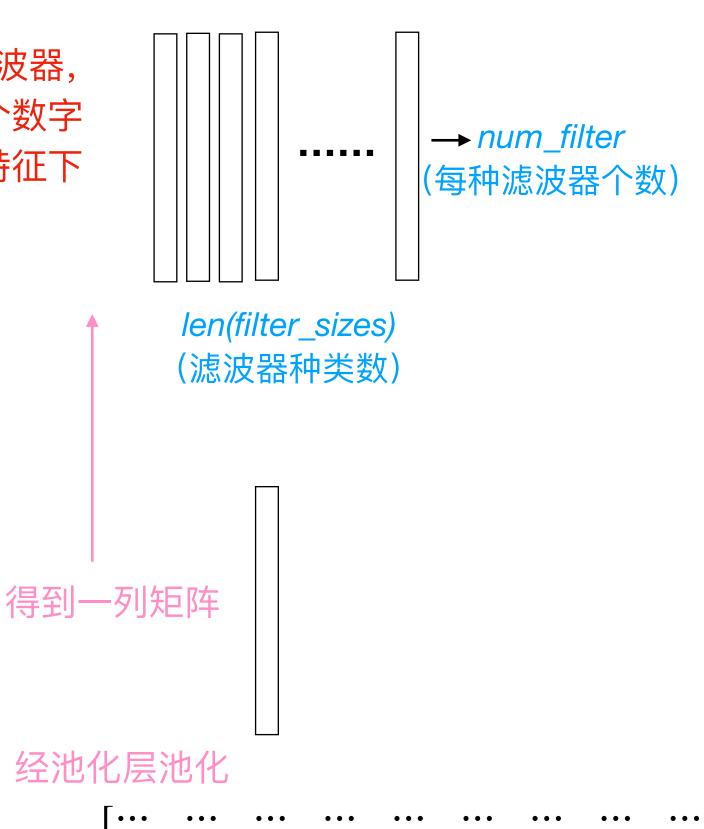

经Relu层激活

多个滤波器将得到多列矩阵(pooled_outputs)

每一列代表一个滤波器, 既一种特征,每个数字 代表某句话在某特征下 取值

sequence_length-filter_size+1
